Minutes of meeting
Date: 02/10/2023
Participants: Mihail, Desislav, Stanislav, Atanas
Technical teacher: Olga Makoveeva
Subject: UML Class Diagram and Forms App

Dear Ms. Makoveeva,

These are the key points from our group meeting that we discussed on Monday.
Meeting Frequency: Agreed to have one weekly group meeting and two meetings during client engagements.
Project Priorities: First submission should focus on the desktop application, featuring a working login form, and employee and animal management systems.
UML Class Diagram: Discussed and presented, demonstrating SOLID principles, inheritance, and polymorphism. For now it is satisfying, we will keep on updating it while implementing other features.
Desktop Application: Reviewed the application, beginning with the login form.
Client Requirements: Emphasized that we should strictly adhere to the client's requirements without implementing additional features, even if it makes sense to add them.
Database: For the initial presentation, we will use a local database as an online one has not yet been provided.

Best regards,

Group 6
